HYDROKLEEN SYSTEMS - DRY PELLET CHLORINATOR

Product Information Well PRO-1

Clean up your well water problems . . .
with the first compact, low-profile dry pellet chlorinator.

Irons out water problems without a wrinkle in your yard's good looks.
The first compact low-profile, dry pellet chlorinator for home well water needs. Foul-smelling, corrosive hydrogen sulfide. Sink-staining iron and manganese. Slime-causing, pump-clogging iron bacteria. These are unpleasant, and potentially costly, facts of life in many residential water wells. Now, the Well PRO dry pellet chlorinator lets you control these problems at their source (in the well itself) with a compact, low-profile unit that blends comfortably into any home landscape. Designed specifically for residential use, the Well PRO chlorinator maintains your yard's aesthetics. The Well PRO chlorinator is constructed of rugged, matte black thermoplastic to resist corrosion from chlorine or the weather and mounts directly over your well for minimum intrusion on your landscape design.

No more embarrassing rotten egg smell and taste.
Hydrogen sulfide gas is the source of the foul "rotten egg" smell and taste that plague so many home water systems. Produced by natural decomposition of underground organic deposits and the action of sulfate reducing bacteria, hydrogen sulfide is highly corrosive and can cause damage to well casings, pumps and plumbing fixtures. By continuously destroying bacteria throughout your water system, the Well PRO chlorinator ensures a constant supply of palatable, odor-free water in your home.
